

StepOne AI Buildathon Submission

Project: Content Intelligence Engine (CIE)

Architected by: Atharva Bodade & Team

1. Project Overview

The **Content Intelligence Engine (CIE)** is an agentic systems-level solution designed to automate event marketing workflows. Built with a "Sovereign Engineering" mindset, the system handles end-to-end media selection, platform-specific content generation, and automated QA.

2. Technical Verification (GitHub)

The complete source code, including a verified input-to-output flow and commit history, is available at the link below:

Repository Link:

<https://github.com/UnsettledAverage73/content-design-engine>

3. Key Features Verified

- **Explainable AI (XAI):** Generates a `log.json` audit trail for every asset rejection/selection decision.
- **Dual-Pass VLM Scoring:** Uses *Gemini 1.5 Flash* for technical and marketing utility assessment.
- **Agentic Robustness:** Hierarchical agents for Case Studies (Analyst) and Social Posts (Creator), with a dedicated **QA Agent** for hallucination grounding.
- **Systems Hardening:** Automated image resizing and keyframe sampling to handle high-bandwidth event data without system failure.

4. Live Demo Flow

1. **Input:** Raw event folder (JPG/MP4) provided via CLI.
2. **Process:** Async metadata extraction → VLM Scoring → Multi-Agent Text Generation → QA Pass.
3. **Output:** Structured `/dist` directory containing platform-ready assets and decision logs.

5. Team Credentials

- **Atharva Bodade:** Building Locally AI integrated IDE
- **Track Record:** Finalists in SIH 2024 and Woxsen AI Hackathon (Top 15/150).
